Complete Aquaculture Camera Systems

Imenco has been a leading global developer of cameras for use underwater for more than 30 years

This has given us a unique knowledge of optimizing image quality and design for the rough environment the cameras are going to operate in. Our camera system for the aquaculture industry is developed based on this expertise in close cooperation with our customers. The best possible image quality combined with ease of use has been the focus through the development stage.

The feedback from our customers shows that we have succeeded. We offer a complete camera system with IP camera where transmission takes place via fiber cable or wireless. Our Gemini camera is controlled by the most powerful camera-winch on the market, Imenco Taurus winch. With our monitoring solution, you are guaranteed the best picture quality even under difficult lighting conditions both above and below water.
