

Truster Replacement System

A solution for truster replacement on FPSO or other floating offshore installations

The trusters can be replaced while the installation is at full production, no need to go to shore or to empty storage tanks.

Truster Replacement System

- Safety: Change-Out can be performed by means of ROV, no divers present in critical operations
- Cost: Change-out operation can be performed OFFSHORE, while maintaining full production. The system is designed to allow for the use of rental winches, decreasing purchase cost considerably and also mitigating maintenance
- Customizable: System can be customized to different ships, and also for RIG's and other type vessels or thrusters
