

Smart Dive Dive monitoring system

The system documents and monitors your diving operations

The dive monitoring systems replaces our older version of motive, and the system is a PLC based system with high flexibility and can be customized to client specifications if needed. Specially designed for Air dive. But can be customized for SAT diving.

Smart Dive Dive monitoring system

Black box technology. Our new black box will store data for all your diving operations. From registration of divers through the dive and if required, into the chamber. The system will document and record diving activities in and outshore. The system will follow the diver through the recorded and stored for future documentation.

The quality of the breathing gas, pressure on your on board gas storage and bailout bottle, depth and hot water temperature are the basic monitored sensors. Together with audio and video. The system can handle up to 1000 sensors input for monitoring and storage.

Features

- Alarms can be set individually for each sensor.
- Ethernet will make it possible for clients to follow the diving operations live, from any location.
- By implementing this system, diving will be a safer, more precise documented operation
- Use your existing sensors
- Follow the dive from anywhere via video-link
- MAX Depth, Current Depth and Time highly visible at all time.

Control Panel

- Depth
- Temperatures
- Analyzers
- Gas banks
- Bailout bottle

Will follow the proposed new logging requirements 2.8.15 26-32 from arbeidstilsynet.
