

Hydraulic Service

Imenco has been producing and carrying out maintenance on hydraulic cylinders since the 1950s

Imenco has been producing and carrying out maintenance on hydraulic cylinders since the 1950s and has an unique knowledge in the field. We carry out service and overhaul assignments on all types of larger cylinders – both cylinders produced by us and any other brand.

We have experienced service engineers who take on “supervisor” assignments all over the world. We have a well-equipped service workshop with several traverse cranes with a capacity of 2 x 20 tonnes, where we can accommodate all types of cylinders regardless of size and make from ships, offshore installations etc.

With the help of our engineers and machinists we are able to repair any new parts for all types of cylinders. In case of major damage, we can drill and hone cylinders. We also have one of Europe’s largest stock of gaskets/seals for hydraulic cylinders that enable us to perform extensive repairs quickly and painlessly.
